### SUMMARY

Flutter Developer with hands-on experience building clean, responsive, cross-platform mobile applications. Currently working at MorosoftLabs, focused on advanced state management with Riverpod and Provider, offline-first architecture using Hive, and seamless REST API integration with C# ASP.NET. Comfortable across the full stack, including backend development and relational/NoSQL database management, with a track record of turning complex requirements into reliable, production-ready mobile solutions.

### WORK EXPERIENCE

#### Flutter Developer | MorosoftLabs

2025 - Present

- Develop and maintain high-performance cross-platform mobile applications using Flutter and Dart.
- Manage complex app state, async caching, and efficient UI rebuilding using Riverpod and Provider to deliver a smooth, responsive user experience.
- Build offline-first mobile workflows using Hive for local storage, allowing apps to function fully without internet access before syncing seamlessly to the cloud.
- Integrate and consume secure RESTful Web APIs built with C# ASP.NET, focusing on clean architecture and efficient data routing.
- Work with Firebase services (Authentication, Firestore, Cloud Storage) and manage data across relational (MS SQL Server) and NoSQL (MongoDB) databases.

### PROJECTS

**Repair Your Car (RYC):** A smart car-troubleshooting app providing step-by-step, expert-verified pictorial guides. Built distinct dashboards for Users, Experts, and Admins, and implemented safe data-deletion checks and a rating system on the backend. [\[Flutter, Dart, C# ASP.NET, MS SQL Server\]](#)

**Clinic Management System:** A full-stack mobile application enabling patients to search doctors by specialty, view real-time slot availability, and manage appointments with status tracking. Implemented a debounced, multi-criteria search engine, engineered a scalable REST API using C#.NET Core and MongoDB for secure CRUD operations, and used Flutter Provider for complex state synchronization. [\[Flutter, Provider, C#.NET Core, MongoDB\]](#)

**ShopFlow Full-Stack E-Commerce App:** Built a dual-role (Customer/Admin) e-commerce app with real-time data sync using Firebase Authentication and Cloud Firestore. Implemented the complete shopping flow (browsing, search/filter, cart, wishlist, checkout, live tracking) and designed a custom real-time notification system using Firestore document-change listeners. Applied clean architecture using Riverpod for scalable state management and integrated a camera picker, SharedPreferences, and a Pakistan-cities autocomplete system. [\[Flutter, Riverpod, Firebase, Cloud Firestore\]](#)

**Workout Logger:** A lightweight fitness app for gym-goers to track daily routines. Used Riverpod for predictable state management and Hive so users can log workouts instantly without waiting on network connectivity. [\[Flutter, Dart, Riverpod, Hive\]](#)

### TECHNICAL SKILLS

- **Languages:** Dart, C#, SQL
- **Mobile Development:** Flutter, Cross-Platform App Development (iOS & Android)

- **State Management & Architecture:** Riverpod, Provider, Offline-First Architecture, Async Caching, Clean Architecture
- **Backend & APIs:** C# ASP.NET Web API, C#.NET Core, RESTful API Design & Integration, Secure Authentication
- **Databases:** MS SQL Server, MongoDB, Hive (Local DB)
- **Cloud & Tools:** Firebase (Auth, Firestore, Storage), Git & GitHub, Postman, Android Studio, VS Code
- **Security Awareness:** Basic penetration-testing exposure (Kali Linux, DVWA) and network port scanning fundamentals supports writing security-conscious API and backend code.

## EDUCATION

---

### Bachelor of Science in Computer Science (BSCS)

2022 - 2026

Barani Institute of Information Technology (BIIT), Rawalpindi, Punjab, Pakistan

**Spoken Languages:** Urdu (Native / Full Professional), English (Professional Working Proficiency)

## ADDITIONAL INFORMATION

---

- Experienced in managing the full mobile development lifecycle - from UI design and local data handling to API integration and deployment, with an ATS-friendly stack of Flutter, Dart, Riverpod, Hive, C# ASP.NET Core, Firebase, and REST APIs.
- Adept at collaborating in professional environments to deliver scalable, maintainable digital products.
